

R jobs in the heavens

Running R jobs at large scale (remotely)

- A good point: Collaboration and sharing codes and analysis
- Local clusters... you may have access to one in you institution, but
 - high cost for maintenance and administration...
 - it must be accessible to all researchers... independently from subject
 - young guns and basic sciences are not very appealing to deserve access...

Cloud possibilities

Amazon Web Services - AWS

- Getting started with R on Amazon Web Services - <https://aws.amazon.com/blogs/opensource/getting-started-with-r-on-amazon-web-services/>
- Running an R Code on AWS Batch - <https://medium.com/geekculture/running-an-r-container-on-aws-batch-on-production-9be336c34f95>
 - Jobs are submitted via Docker files with help of **packrat** R package
 - cost? only free trial?

Azure - Microsoft

- R workloads on Azure Batch - <https://azure.microsoft.com/pt-br/blog/r-workloads-on-azure-batch/>
- Tutorial: Run a parallel workload with Azure Batch using the .NET API - <https://docs.microsoft.com/en-us/azure/batch/tutorial-parallel-dotnet>
 - paid if you have an institutional account?

Google Cloud Platform

- Running R at Scale on Compute Engine - <https://cloud.google.com/architecture/running-r-at-scale>
 - If not eligible for a free trial, "... a 6-node cluster composed of n1-standard-4 instances, would cost \$1.84/hr ..."

Oracle cloud computing

- Using Oracle R Enterprise Embedded R Execution
 - free credits for new accounts... better performance? lower costs?

R possibilities

R Cloud - AT&T Labs

- Try It, Online or Locally - <https://rcloud.social/tryit/index.html>
 - support to different programming languages in the same code
 - code and analysis everything is public

Rstudio Server or connect???

- From “What is the difference between rstudio-connect and rstudio-pro” - <https://community.rstudio.com/t/what-is-the-difference-between-rstudio-connect-and-rstudio-pro/43949>
- RStudio Server Pro - Very similar to the Desktop IDE, but runs on a server.
 - it allows you to have more compute resources closer to your data,
 - it provides a uniform environment for teams that makes it easier to collaborate,
 - and it provides controls for administrators to monitor and scale work.
- RStudio Connect - Makes it easy to share R Markdown reports,
 - deploy shiny web applications, and APIs written in R.
 - GitHub stores your code statically, RStudio Connect knows how to run it, (accessibility to non R users... shiny applications)
 - run reports on a schedule and send emails with the results.
- R Studio Server on Google Cloud - <https://towardsdatascience.com/r-studio-server-on-google-cloud-dd69b8bff80b>
- Getting Started with RStudio Connect for GCP - <https://support.rstudio.com/hc/en-us/articles/360033988434-Getting-Started-with-RStudio-Connect-for-GCP>

Docker

- All starts with Docker;
- Primary focused on reproducibility? But also have your code running in any cloud service.

Container it! Rstudio with all you need in a docker container and deploy in a virtual machine... you don't need to install everything again and again manually... and have your code “forever”.

- You have to setup and install everything for the first time, start and stop the job whenever you want.
 - Even if you stop the VM if there is files in the storage will be charged by the service.

Everything is Docker!!!

containering R

- Docker + R - Rocker package - <https://www.rocker-project.org/>
- Rstudio...
 - support for Shiny apps

containering your code

- R.project + Github with Docker...
 - your favorite R packages
 - third party softwares... latte integrale for example
- dockering R
 - Using R via Rocker A Brief Introduction to Docker for R - http://dirk.eddelbuettel.com/papers/chirug_nov2019_rocker.pdf
 - a good quick Docker introduction for R users - <https://colinfay.me/docker-r-reproducibility/>
 - example of calling additional libraries - Running your R script in Docker - <https://www.r-bloggers.com/2019/02/running-your-r-script-in-docker/>
- dockering R studio
 - a nice introduction and well organised setup - <https://www.symbolix.com.au/blog-main/r-docker-hello>
 - example setting additional libraries (but using rstudio server) - <https://davetang.org/muse/2021/04/24/running-rstudio-server-with-docker/>
 - sharing and Running R code using Docker - <https://aboland.ie/Docker.html>
- advantage in using rstudio images... maybe community is working more in containerisation... R Docker faster - My experiment shows R Docker images will build much faster thanks to the new package manager from RStudio - from <https://medium.com/@skyetetra/r-docker-faster-28e13a6d241d>

“the easy way” to get started quickly

- Rstudio on google cloud Marketplace... <https://support.rstudio.com/hc/en-us/articles/115010260627-Getting-Started-with-RStudio-Workbench-RStudio-Server-Pro-Standard-for-GCP>
 - you can use it all interactively, but has to install everytime you setup a virtual machine...
